### 게시판설계 (MVC2 패턴)

#### 게시판설계(세부기능)

게시판설계(세부기능:회원가입)

```
if (name == null || name.equals("") || !reg.isValid(MEMBER_NAME, name) ||
id == null || id.equals("") || !reg.isValid(MEMBER_ID, id) ||
pwd == null || pwd.equals("") || !reg.isValid(MEMBER_PASSWORD, pwd) ||
confirmPwd == null || confirmPwd.equals("")) {
    response.setContentType("text/html;charset=UTF-8");
    PrintWriter out = response.getWriter();
    out.println("<script>alert('잘못된 접근입니다.');location.href='/';</script>"
    out.close();
    return null;
}
```

▶ 이름, 아이디, 비밀번호가 잘 들어갔는지 정규표현식으로 확인

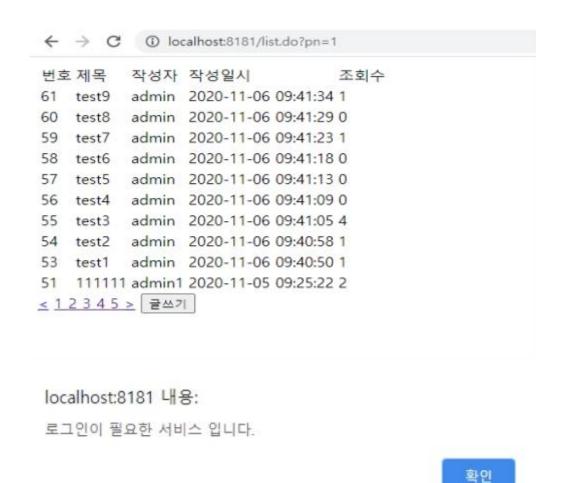

게시판설계(세부기능:로그인)

```
    ← → C ③ localhost:8181/login.do
    아이디:
    비밀번호:
    로그인
    아이디찾기 비밀번호찾기
```

```
if (id == null || id.equals("") || pwd == null || pwd.equals("")) {
   response.setContentType("text/html;charset=UTF-8");
   PrintWriter out = response.getWriter();
   out.println("<script>alert('잘못된 접근입니다.');location.href='/';</script>");
   out.close();
   return null;
MemberService svc = new MemberService();
MemberVo vo = svc.getMemberInfo(id);
if (vo == null || !BCrypt.checkpw(pwd, vo.getPwd())) {
   response.setContentType("text/html;charset=UTF-8");
   PrintWriter out = response.getWriter();
   out.println("<script>alert('아이디 또는 비밀번호를 확인해 주세요.');history.back();<
   out.close();
   return null;
```

▶ DB 에 있는 회원정보와 같은지 확인 후 로그인

#### 게시판설계(세부기능:게시판및게시판수정)

▶ 글쓰기는 로그인 후 가능

```
① localhost:8181/modify.do?pn=1&sq=55
제목 test3
      테스트 글
내용
 수정
 LoginManager 1m - LoginManager.getInstance();
 String id = lm.getMemberId(request.getSession());
 if (id -- null) {
     response.setContentType("text/html;charset=UTF-8");
     PrintWriter out = response.getWriter();
     out.println("<script>alert("잘못된 웹근입니다.");location.href='/login.do';</sc
     out.close():
 String num = request.getParameter("sq");
 RegExp regexp = new RegExp();
 if (num == null || num.equals("") || !regexp.isValid(SEQUENCE_NUMBER, num)) {
     response.setContentType("text/html;charset=UTF-8");
```

▶ 게시글 작성자와 아이디가 같아야 수정 및 삭제 가능

out.println("<script>alert('잘못된 접근입니다.');history.back();</script>");

PrintWriter out = response.getWriter();

out.close();

#### 게시판설계(세부기능:로그인매니저)

```
public class LoginManager implements HttpSessionBindingListener {
       private static Hashtable LoginUsers = new Hashtable();
      private LoginManager() {
          super();
       public static LoginManager getInstance() {
140
          return LoginManager.LazyHolder.INSTANCE;
180
          private static final LoginManager INSTANCE = new LoginManager();
      @Override
      public void valueBound(HttpSessionBindingEvent event) {
          LoginUsers.put(event.getSession(), event.getName());
      @Override
       public void valueUnbound(HttpSessionBindingEvent event) {
          loginUsers.remove(event.getSession());
      public void removeSession(String id) {
          Enumeration e = LoginUsers.keys();
          HttpSoccion coccion - mull+
```

```
Enumeration e = LoginUsers.keys();
   HttpSession session = null;
   while(e.hasMoreElements()) {
        session = (HttpSession) e.nextElement();
        if (loginUsers.get(session).equals(id)) {
           session.invalidate();
public boolean isLogin(String sessionId) {
   boolean isLogin = false;
   Enumeration e = loginUsers.keys();
   String key = "";
   while(e.hasMoreElements()) {
       key = (String) e.nextElement();
       if (sessionId.equals(key)) {
           isLogin = true;
   return isLogin;
public void setSession(HttpSession session, String id) {
    session.setAttribute(id, this);
public String getMemberId(HttpSession session) {
   return (String) LoginUsers.get(session);
```

#### 게시판설계(세부기능:정규표현식)

```
public class RegExp {
       public static final int MEMBER NAME = 0:
       public static final int MEMBER ID = 1;
       public static final int MEMBER PASSWORD = 2;
       public static final int SEQUENCE NUMBER = 3;
10
       private final String EXP MEMBER NAME = "^[가-힣a-z]{1,10}$";
11
12
       private final String EXP MEMBER ID = "^[a-z0-9]{4,20}$";
       private final String EXP MEMBER PASSWORD = "^.{4,20}$":
13
       private final String EXP IS NUMBER = "^[1-9][0-9]*$";
14
15
160
       public boolean isValid(int type, String data) {
17
           boolean result = false:
18
           switch (type) {
           case MEMBER NAME :
19
20
               result = Pattern.matches(EXP MEMBER NAME, data);
               break:
21
22
           case MEMBER ID :
               result = Pattern.matches(EXP MEMBER ID, data);
23
24
               break:
25
           case MEMBER PASSWORD :
26
               result = Pattern.matches(EXP MEMBER PASSWORD, data);
27
               break:
28
           case SEQUENCE NUMBER :
               result = Pattern.matches(EXP IS NUMBER, data);
29
               break;
30
31
32
33
           return result;
```

## 게시판 테스트 케이스
